

If you have a high heating bill, especially if you are on oil, we can offer you a great deal: heat for 20% less than oil, guaranteed for 20 years. We'll install, service and maintain a top quality clean-burning wood-chip boiler at your premises free of charge - and provide it with locally sourced fuel

We'll be doing a co-operative share issue in Spring 2012. You can invest £250-£20,000 and get a vote in the running of the co-operative as well as a decent return - we are aiming for an average of 6-8% annually

Woolhope Dome Community Woodfuel is a 100% community-owned project aiming to bring local woodlands back into active management and reduce carbon emissions

Woolhope Dome Community Woodfuel is an Industrial and Provident Society registered with the FSA (Reg No. 31371R)

Working with:

Is your business heating bill above £5000 ? Do you want a free boiler which saves you money and reduces carbon emissions ?

Do you want to invest in a local, green business and get a decent return on your investment ?

Do you own or manage woodlands in Herefordshire?

Woolhope Dome Community Woodfuel Co-operative

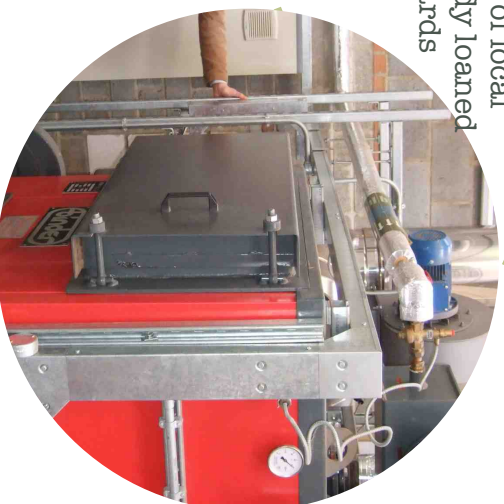

Many woodlands in the Woolhope Dome area of South Herefordshire are not managed to their full potential. By providing a good price for woodchip we can bring them back into use - increasing wildlife habitat and biodiversity at the same time. The co-operative will source, dry and chip its own woodfuel to high quality standards

The co-operative will raise money through a community share offer in Spring 2012 to set up the wood supply operation, and to buy and install boilers.

Anybody can join the co-operative with an investment of £250-£20,000, and will get one vote irrespective of the amount they invest. Members receive an annual return on their investment which is projected as 6-8%. We will prioritise local applicants for co-op membership.

The project is run by a board of local people. Supporters have already loaned the project £30,000 towards development costs.

Organisations and businesses are stuck with crippling heating price rises and high carbon emissions from oil boilers. We will supply them with brand new, very high efficiency woodchip boilers at no upfront cost - they sign up to a heat supply contract which guarantees them heating costs 20% below oil prices and we do the rest.

Would one of our boilers work for you?

- I have a large boiler and spend £5000+ on heating oil per year
- I would be happy to sign a long term deal for guaranteed reduced costs
- I am unlikely to want to invest in a new biomass boiler myself
- I am in Herefordshire and keen to work with a Green, community-based organisation

Next Steps

If you can tick the boxes in the checklist we would like to visit you and check that one of our boilers will work for you

We will ask you to sign a non-binding Expression of Interest form

This allows us to commission our technical experts to do a full study of your premises and heating requirements

We will then make you a formal proposal for heat service to your premises

We aim for the first installs to happen in late Spring 2012
